### 5.2.1 Detailed Description

Contains output from the aim assist calculations.

The values are unclamped - they are additions. When assigning to properties with a limit like the camera pitch, the resulting value has to be clamped before assigning to the camera pitch.

### 5.2.2 Property Documentation

#### 5.2.2.1 PitchAdditionInDegrees

```
float Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.Model.AimAssistResult.PitchAdditionInDegrees [get]
```

Has to be added to the pitch of the camera. Already contains the direction with its Sign.

### 5.2.2.2 RotationAdditionInDegrees

```
float Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.Model.AimAssistResult.RotationAddition↔
InDegrees [get]
```

The horizontal turn adjustment that's calculated by the aim assist.

Has to be added to the rotation. Already contains the direction with its Sign.

### 5.2.2.3 TurnAddition

```
Vector3 Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.Model.AimAssistResult.TurnAddition

### Public Attributes

- bool **aimAssistEnabled** = true
- float **smoothnessMultiplier** = 0.6f

### 5.4.1 Detailed Description

Picks a more dominant axis for look input (horizontal or vertical) and downscales the other axis by a given factor.

This makes it easier to do horizontal or vertical turns on the controller.

## 5.4.2 Member Function Documentation

### 5.4.2.1 AssistAim()

```
Vector2 Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.AimEaseIn.AimEaseIn.AssistAim (
    Vector2 lookInputDelta ) [inline]
```

Downscales the less dominant axis in input.

The input is the controller input delta. The output is the modified controller input delta - NOT the actual angles to rotate.

Run your look input through this before proceeding with the rotations.

#### Parameters

<i>lookInputDelta</i>	controller look input delta
-----------------------	-----------------------------

#### Returns

the modified look input delta

The documentation for this class was generated from the following file:

- AimEaseIn/AimEaseIn.cs

```
AimAssistResult Agoston_R.Aim_Assist_Pro.Scripts.AimAssistCode.AimLock.AimLock.SnapAim (
    AimLockInput input ) [inline]
```

Smoothly snaps aim to the target's position, at its center.

Takes in the delta time as it can be different based on where the input logic is implemented (Update, fixed update etc) or scaled time.

Returns the needed adjustment in degrees for the pitch and rotation. This adjustment is an addition - you need to add it to your turn / pitch.

#### Parameters

<i>input</i>	The input data for the aim lock. All fields have to be set for it to work.
